BABY WORKS FOR HIS LIVING

Infant Is Found In London Who Hooks Eyes on Cards for His Poor Mother.

A baby aged two and one-half years who works for his living by hooking eyes on a card for his poor, working mother, has been discovered in Lon-

"Gravely and industriously this baby toiler placed hook after hook in its place on the cord, saving a few minutes every hour to the mother who earns three shillings a week at the most monotonous, weary, treadmill type of woman's work that exists. There are 12 hooks and eyes on each card, and the worker is paid tenpence for every gross of cards. First she sews the hooks on the cards and the child links each hook with an eye. Then the eyes are stitched in place.

In Great Britain there are 200,000 school children in full attendance who work out of school hours for wages. There are between 80,000 and 90,000 half-timers who do a half-day in the factory and a half-day in the school, whilst the full-time workers between thirteen and fourteen years of age probably number 300,000. From these statistics alone it can be seen that over half a million children under fourteen years of age are breadwinners. There are 120,000 factory children under fourteen and nearly 400,-000 children and young persons under signteen years of age working in the factories.

The Remnant.

This world is full of people whose whole happiness and inner salvation depend on their doctrine and practice of the remnant. We have referred already to the decay and obscurity of later life. But the position is equally true of multitudes in their prime. With them also the fragment is all that seems left. They have lost the thing which made life desirable. Their ortune has gone, or their friend, or their health. Passion has wrought distillusion. The man or woman on whom they had staked their affections is not what they thought. The cup which brimmed and sparkled has turned into a draught of bitterness. Is this, then, life's defeat? Not unless we so choose. There is no loss of fortune, no wreck of personal affection, no disaster in the sphere of the visible but can be turned by the soul's inner energy into some higher phase of the living .- J. Brierley.

Aeroplane Is Simple. The working parts of the modern flying machine are infinitely fewer in number than those of the automobile, the motor boat, the railroad locomotive or the steamship. Far more complex is the operation of a high-powered motor car than that of a high-powered aeroplane. Far more delicately adjusted are the thousands of parts of the steam or electric locomotive than the mechanism of the flying machine. It is this very simplicity of construction and operation that has enabled the aeroplane to outdo in continuous motion every other known form of conveyance, except steamers, motor boats and sailing ships, and these ast named are able to maintain their notion only because of their huge triving mechanism, out of all proportion to the bulk that is propelled.

Learning to Spell. Little Margaret, who is three years old, lived for a long time next door to a family who kept a cat bearing the name of Billy. Then she moved away from the family, and did not see the cat again.

Beveral days ago Margaret's mother tried to teach her how to spell cat and dog. After many efforts she succeeded in getting her daughter to spell the words after her, and stopped for the first lesson. The day following the mother said

auddenly: "Margaret, what does out spell?" She did not have to wait for an anover. Quick as a flash the child ed toward her.

CARRETA HAS LONG HISTORY FORGOT HER SECOND WEDDING

in Use Over Two Hundred

The ancient carrets, now in the exhibit room of the Los Angeles Cham per of Commerce, has had an ev ful history, as wagons go. It was the property of Alfonso, a Tesuque Insaid it had belonged to his greatgrandfather and that it had been exlibited at a local fleets years before as the oldest carrets in the neighborood. From these facts, well su tiated, and the great age to which in lians live, as a rule, this ancient carrets is estimated to be much over 200 years old. It was purchased by Cap-tain Newton Chittenden, a noted Indian explorer, antiquarian and ethnolgist, now living in Pomona, Cal.

On November 28, 1896, this old time art left Rediands, Cal., on its own rheels and reached Los Angeles Dember 15, a distance of over sixty niles. Captain Chittenden accompanied it, camping on the way and walked most of the distance, watching with anxious eyes to see that it did not fall to pieces, like the "deacon's wonderful one-horse shay," from Ita great age. But it survived the journey in good shape and was hauled to the Chamber of Commerce exhibit room, where, sheltered from wind and weather, it may remain a possible 200 vears more.

The wheels are made of cross sec tions of a sycamore tree, 38 inches in diameter and about six inches thick at the outer rim. The hubs are of one piece with the body of the wheels and are roughly extended out to a length of 18 inches. Wooden pins through the axle secure the clumsy wheels. The body is made of cottonwood, excepting the tongue, which is a twisted and gnarled stick of mesquite four feet long. It was driven by oxen hitched to the horns with thongs of rawhide. Its counterpart may be seen in the country districts of Mexico today, drawn in a similar manner, as this was when new, 200 years and more ago.

WHEN THE BARD WAS YOUNG

How Shakespeare Delighted Sir Mar maduke With His Recitation of Some Exquisite Ballads.

"Let us hear of it then, and quickly." cried Sir Marmaduke, putting his hand kindly upon the boy's head. William Shakespeare saw all eyes were fixed upon him; yet there was a friendliness in every aspect which gave him nought to fear. Standing where he was, with a graceful carriage of himself, and a wonderful pleasant delivery, he presently went on with the verses.

"Bravely spoken!" exclaimed - the old knight, who had observed and listened to the boy manifestly with a more than ordinary satisfaction in his benevolent pleasant aspect. "Never heard I aught more properly delivered."

"Nor I, by'r lady," sald Master Peregrine, in a similar excellent humor. Where didst learn this exquisite ballad, young sir?"

"An' it please you, my mother taught it me," replied William Shake-

"Hast any more such in thy mem-

ory?" inquired the other. "A score at least, an' it please you." answered the boy; "most moving ones of the doings of valiant knights; and sundry of a delicater sort, concerning of the love of fair ladies; besides which I have store of fairy roundelays, that I learned of nurse, Cicely, which smack most sweetly of the dainty blossoms.-Williams, "The Youth of

Speak Only on Invitation.

Shakespeare."

In the heavily cushloned seats of a rain speeding through Massachusetts sat Josiah White and his wife. It was the first time either had been outside the limits of St. Lawrence county, to say nothing of riding in such luxury. with new and ever-changing scenery around them. As the train neared Boston Josiah nudged his wife.

"Abble," said he, close to her ear, 'don't say a word to me and I won't to you while we're goin' through this city. It ain't polite, unless ye're invited."

"What!" "Yes. This is Boston, th' place we've heerd so much on as bein' th' city o' th' cultured, and I just overheerd one o' them distinguished-lookin' gentlemen in the seat ahead tell th' other he wuz goin' to stop off here because he has been invited to speak here tonight."-Judge.

All in the Use.

Even the best things, ill used, become evils, and, contrarily, the worst things used well prove good. A good tongue used to deceit; a good wit used to defend error; a strong arm to murder: authority to oppress; a good profession to dissemble; are all evil. Even God's own word is the sword of the spirit, which, if it kills not our vices, kills our souls. Contrariwise (as poisons are used to wholesome medicines), afflictions and sins, by a good use, prove so gainful as nothing more. Words are as they are taken, and things are as they are used. There are even cursed blessings.-Bishop Hall.

Willis-Why don't you go to church! Gills-Too far. Why don't you go? Willie-We live next door to one. nd I hate to get all dressed up just to go that little way .- Puck.

Woman Signed Her Piret Married Name to Bank Check and Much Trouble Resulted.

"I lest my identity once for the correction after I was married to my sale ond husband," said a woman who formerly lived in New York city, and who now dwells in a New England town. "Soon after my second mar-riage," she added, "I withdrew my personal funds from a New York bank and deposited the money in the town where I now live, giving my present name, of course, and leaving my signature, I had no occasion to draw against the deposit for nearly two simonths, and when I did so I signed my first married name to the check. The person to whom I gave the check did not know I was married to my present husband, as the transaction was one that did not require any mention of my second marriage.
"When the check was sent to my

bank in the town where I live it was returned, marked 'No funda.' check was forwarded to me by the person to whom I gave it, and it was addressed to me as I had signed it. One of the curious things in connection with it was that my present husband is a director of the bank, but, of course, the cashier never thought to ask him, although the bank official knew my other married name. It is the sort of mistake that a woman makes only once."

TWO RATHER BRIGHT DOGS

One Recognized the Letter Was Over-Weight and the Other Perceived Wrong Address.

Two suburbanites, one living near Morton and the other near Primos, were swapping stories of country life as they went home on the 5:35 train. "I have a most intelligent dog," said the Primos man. "I just hand him

a letter and say: "There, Spot!' and off he goes to the post office. I gave him one yesterday and he dropped it. He refused to pick it up, but wagged his tall instead. I suspected something was wrong and picked up the letter and weighed it. It required two cents more postage."

Without the least show of surprise the man from Morton proceeded with his story.

"Dogs are intelligent," he began. "My collie, Carlo, always posts my letters, and one day he, like your dog, dropped a letter on the floor. I thought possibly one stamp was not enough, but in weighing the letter I found that the postage was all right. I gave it back to Carlo, but he let it fall again to the floor. I inspected the letter carefully and found that it was addressed to South Penn square, New York, instead of to Philadelphia."-Philadelphia Times.

Build an Altar for All.

There was a flat-topped rock covered with stones, and as I was looking a writer in the May Wide World several Somali women passed. Each one left the road and, selecting a stone, placed it on the heap. I inquired the reason of this. The Somali version is as follows: In the old days before the Somalis inhabited the country there was a very bad man. After a career of crime, the Prophet Ali, one of Mohammed's successors, pursued him and caught him up by the big rock. The bad man dodged All round the rock until the prophet, growing furious, drew his sword and split the rock clean in two, and the miscreant with it. In turning to go All's horse kicked, and the marks of his hoofs are shown in two round holes in the otherwise smooth stone The split rock has just such an appearance, and from time immemorial it has been the custom for women passing to add a stone to the pile on the altar close by. The Somalis have many legends of the people who occupied the country before them, and talk of them as having been Persians

Peace Wave Swept Ancient Egypt.

Until Cambyses with his Persian myriads swept across defeated Khem. and Phoenicia and Greece, adopting her stored-up wisdom, added thereto the graces of a more artistic ornamentation and aggressive commercial enterprise, Egypt led all nations in the arts of peace and the accumulation of wealth by peaceful trade. And while it is true that individual enterprise was largely hampered by the royal control of foreign trade, it must be remembered that the king acted largely as a trustee for his people and that the Egyptians under most of their sovereigns probably suffered less from plague and famine and were more justly ruled than most of their contemporaries.-"Nobility of the Trades-The Merchant," Charles Winslow Hall, in the National Magazine.

Delusions of the Ear.

There is a cure, it seems, for socalled delusions of the ear in deaf people who think they hear sounds like the whistling of wind, the rustling of leaves, the crackling noises of a telephone, thunder, organ pipes or shouting. Such sounds are remembered, says Doctor Marage, a French aurist, and are caused by personent excitation of the auditory nerve cen-

He has invented an apparatus for studying these really inaudible but none the less tormenting noises, which are apt to take the form in time of a persistent delusion, and he has succeeded in relieving many sufferers by applications of electric alternating currents of very high frequency or by
